

Concrete Technology

In addition to geotechnical testing, we undertake analytical material and concrete testing services from our laboratories at Washington and Harpenden.

We have invested in state of the art concrete testing equipment and offer specialised services including permeability analysis and flakiness testing of aggregates.

Our Chartered Engineers and experienced technicians also offer a concrete advisory service.

Specific services include:

- Conformance tests for cements, cementitious materials, aggregates and recycled materials.
- Assessment of fresh and hardened properties of concrete.
- Assessing the engineering and durability of concrete.
- Structural assessment of concrete structures.
- Characterisation of recycled materials for use in concrete including demolition waste, recycled rubber tyres and glass cullet.
- Development, testing, trial and implementation of concrete mix design systems and providing consultancy in the use of recycled materials.
- WRAP Testing
- Development of value added application of concrete mix designs incorporating recycled materials.
