

Services for Material Approval

Ian Farmer Associates offers a comprehensive material approval and assessment service to all forms of construction throughout the United Kingdom.

These services range from site density compliance to full material type approval. We offer a range of in-situ compliance testing, including insitu density measurement by nuclear density gauge and sand replacement and plate bearing and CBR insitu strength testing.

Site sampling or collection is available throughout the country.

Our UKAS laboratories carry out all associated testing ranging from standard geotechnical (classification to effective stress) to recycled material (Los Angeles abrasion to aggregate composition) with the testing regime being tailored to each individual client's requirements.

Our dedicated team of material engineers, field technicians and laboratory technicians can offer in-situ or laboratory test solutions to any project.
