

ENVIRONMENTAL POLICY

Policy Statement

Ian Farmer Associates provides specialist ground and environmental investigation, construction and material services to Clients involved in the construction, building and environmental industries.

The Company places amongst its highest priorities the identification and management of environmental responsibilities through sound waste minimisation and prevention of pollution practices. It is committed to managing these responsibilities to the highest standards through the adoption of the Laboratory Standard BS EN ISO 17025 and the International Environmental Standard BS EN ISO 14001.

Ongoing achievement against these priorities is regularly reviewed through a series of agreed environmental objectives and targets, which are communicated to staff.

The Company ensures all legislative requirements which can influence the environmental performance of the business are closely monitored, managed and continually reviewed to meet compliance.

Business activities are regularly reviewed to minimise their impact on the environment.

Adopting a continual process improvement philosophy the Directors and staff aim to provide an environmental service that meets Clients quality, budget and programme requirements. As a consequence, the Business Management System has been developed to recognise and control all aspects of the company relevant to the execution of work on projects and other business operations that affect the quality of service to Clients.

It is a requirement that all directors and staff operate within the policies, procedures and guidelines set out in the Company's Business Management System to ensure compliance with Client requirements, BS EN ISO 17025 and BS EN ISO 14001.
